Overview

The NPort IA5000A series device servers are designed for connecting industrial automation serial devices, such as PLCs, sensors, meters, motors, drives, barcode readers, and operator displays. The device servers are ultra rugged with a metal housing, screw connectors, and

full surge protection. The NPort IA5000A series device servers are extremely user-friendly, making simple and reliable serial to Ethernet solutions possible.

Cascading Ethernet Ports Make Wiring Easy (10/100BaseTX models only)

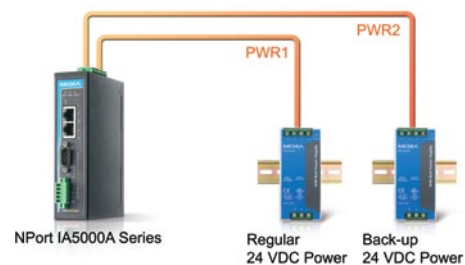

The NPort IA5000A series device servers each have two Ethernet ports that can be used as Ethernet switch ports. One port connects directly to the network or server, and the other port can be connected to another NPort IA device server or another Ethernet device. The dual Ethernet ports help reduce wiring costs by eliminating the need to connect each device to a separate Ethernet switch.

Redundant Power Inputs

The NPort IA5000A series device servers have two power inputs that can be connected simultaneously to live DC power sources. If one power source fails, the other source takes over automatically. Redundant power inputs help ensure that your device server will operate non-stop.

Dual Power Inputs

Relay Output Warning and E-mail Alerts

The built-in relay output can be used to alert administrators when the Ethernet is down, when problems with the power inputs arise, or when there is a change in the DCD or DSR serial signals. An e-mail warning can also be issued when an exception is detected. These functions are valuable tools that enable maintenance engineers to react promptly to emergency situations.

Surge Protection for Serial, LAN, and Power

Moxa's leading-edge surge immunity solution, which is applied to the NPort® IA5000A's serial, power, and Ethernet lines, is tested and proven compliant with IEC 61000-4-5. This state-of-the-art surge protection provides a robust serial-to-Ethernet solution that can

protect electrical devices from voltage spikes and withstand electrically noisy environmental conditions, such as oil and gas, and power automation applications.

Industrial-grade Certification

To ensure safe and reliable operation in industrial environments, the NPort® IA5000A device servers have obtained various industrial certifications, including an IP30 rating for mechanical protection and UL508 safety certification for industrial control equipment. In addition,

these device servers are UL/cUL Class 1 Division 2 Groups A, B, C, D certified for explosion-safe usage, and with ATEX Class 1 Zone 2 certification, are suitable for use in hazardous locations.
