

QUINT POWER power supply units – Highest system availability due to SFB-Technology Standard circuit-breakers triggered reliably and quickly!

In order to be able to trigger standard circuit-breakers magnetically and quickly the SFB technology supplies up to six times the nominal current for 12 ms.

The indicated values specify the distance (l) from the power supply to the load. The following margin parameters form the basis of the calculation:

- Standard circuit-breaker of Siemens, Characteristic B and C (e.g. B6: 5SY6106-6).
- Electromagnetic triggering of the standard circuit-breaker at:
 - Charakteristic B:
(5 x rated current) x (correction factor 1.2 at 0 Hz) = 6 x rated current
 - Charakteristic C:
(10 x rated current) x (correction factor 1.2 at 0 Hz) = 12 x rated current
- Ambient temperature: + 20 °C
- The internal resistances of the standard circuit-breakers have been considered
- In addition to the short-circuit current, the respective power supply unit supplies half the nominal current for parallel connected loads
