## 8 Connection notes and examples

When connecting the sensors observe the assignment of the terminal points to the process data.

**NOTE: Malfunction**

The supply voltage  $U_S$  is used internally as the auxiliary supply. If it is not present, the terminal will not operate properly. Make sure that the supply voltage  $U_S$  is available.

**NOTE: Malfunction**

The sensors and  $U_S$  must be supplied from the same voltage supply.

The simplest way to meet this requirement is to use the IB IL PD 24V-PAC terminal. Wire the 24 V sensor connections to this terminal. In this way, they are supplied from the potential jumper  $U_S$  of the Inline station.

The sensors can also be connected via external busbars. Ensure that the sensors and  $U_S$  are supplied from the same voltage supply.
