AXL E IOL AO1 U M12 R

**Axioline E IO-Link/analog converter
for connecting an analog actuator,
0 V ... 10 V, rectangular version**

Data sheet
8588_en_08

1   Description

The IO-Link/analog converter is an IO-Link device that converts the IO-Link protocol into analog signals.

It therefore offers the option of transmitting signals to analog actuators via an IO-Link master.

IO-Link features

–   Connection to an IO-Link master
     with M12 connector (A-coded, 4-pin)
–   IO-Link A port
–   IO-Link specification V1.1.1

General features

–   Rectangular version
–   1 IO-Link interface
–   1 analog output
–   Connection of the actuator in 3-wire technology
     via an M12 connector (A-coded, 5-pin)
–   Voltage range: 0 V ... 10 V
–   FE connection for local connection
     to functional earth ground
–   Supply of the module electronics and the actuator
     via the IO-Link interface of the IO-Link master
–   Local status indicator
–   Degree of protection IP65/67

2   Table of contents

3   Ordering data

Description	Type	Order No.	Pcs./Pkt.
Axioline E-IO-Link/analog converter for connecting an analog actuator, 0 V ... 10 V, M12 fast connection technology, angled version	AXL E IOL AO1 U M12 R	2700278	1

4   Technical data

Dimensions (nominal sizes in mm)

Width	16.6 mm
Height	42 mm
Depth	66.5 mm

General data

Weight	34 g
Ambient temperature (operation)	-25 °C ... 60 °C
Ambient temperature (storage/transport)	-25 °C ... 85 °C
Permissible humidity (operation)	5 % ... 95 %
Permissible humidity (storage/transport)	5 % ... 95 %
Air pressure (operation)	70 kPa ... 106 kPa (up to 3000 m above sea level)
Air pressure (storage/transport)	70 kPa ... 106 kPa (up to 3000 m above sea level)
Degree of protection	IP65/67
Protection class	III, IEC 61140, EN 61140, VDE 0140-1
Degree of pollution	2

IO-Link

Specification	V1.1.1
Reverse polarity protection	Yes
Transmission speed	230,4 kBit/s (COM3)
Frame type	1
Cycle Time	min. 2 ms
Process data update	2 ms
Amount of process data	16 Bit (Input data), 16 Bit (Output data)

IO-Link ports	
Number of ports	1
Connection method	M12 connector, A-coded

IO-Link port supply	
Nominal voltage for I/O supply	24 V DC (This supply voltage is provided via the IO-Link interface of the IO-Link master.)
Sensor supply voltage	24 V DC (This supply voltage is provided via the I/O supply.)
Current consumption	typ. 16.5 mA ±15 % (at 24 V DC) max. 135 mA
Nominal current	max. 100 mA
Reverse polarity protection	yes
Short-circuit protection	yes
Overload protection	yes

Analog output	
Number of outputs	1 (voltage)
Connection method	M12 connector, A-coded
Connection method	3-conductor
Voltage output signal	0 V ... 10 V
Load/output load voltage output	min. 2 kΩ
D/A resolution	12 bit
Data formats	IB IL, S7-compatible
Permissible cable length	max. 30 cm (Shielded cable)

Error messages to the higher level control or computer system	
Short-circuit	Message in the diagnostic code (in the IB IL format)
Configuration invalid	Message in the diagnostic code (in the IB IL format)
Module faulty	Message in the diagnostic code (in the IB IL format)

Mechanical tests	
Vibration resistance according to EN 60068-2-6/IEC 60068-2-6	Operation: 2g
Vibration resistance according to EN 60068-2-6/IEC 60068-2-6	Storage/transport: 5g
Shock according to EN 60068-2-27/IEC 60068-2-27	Operation: 30g, 11 ms, three shocks in each space direction
Shock according to EN 60068-2-27/IEC 60068-2-27	Storage/transport: 50g, 11 ms, three shocks in each space direction
Continuous shock according to EN 60068-2-27/IEC 60068-2-27	10g, 16 ms, 1000 shocks, in all space directions

Approvals

For the latest approvals, please visit phoenixcontact.net/products.

5 Additional tables

The data is valid for nominal operation
(supply voltage = 24 V) in the default configuration
(measuring range 0 V ... 10 V).

Tolerance and temperature response at T_A = -25°C to +60°C	
Drift	
Typical	**Maximum**
±45 ppm/K	±75 ppm/K

The tolerance values refer to the measuring range final value.

| Tolerances influenced by electromagnetic interference			
Type of electromagnetic interference	**Standard**	**Tolerance**	**Criterion**
Electromagnetic fields	EN 61000-4-3/ IEC 61000-4-3	< ±2.0 %	A
Fast transients (burst)	EN 61000-4-4/ IEC 61000-4-4	< ±1.0 %	A
Conducted interference	EN 61000-4-6/ IEC 61000-4-6	< ±0.5%	A

6 Internal circuit diagram

Figure 1   Internal wiring of connections

Key:

Protection	Protective circuit
IO-Link IC	IO-Link circuit
µC	Microprocessor
#	Digital/analog converter
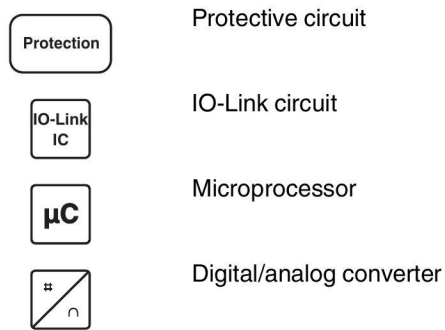

7   Pin assignment

7.1   Connections on the device
Figure 2   Connections on the converter

No.	Connection
1	IO-Link interface (indicated by IO-Link symbol)
2	Fixing options; options for connection to functional earth ground
3	Analog output

7.2   Pin assignment of the IO-Link interface
Figure 3   Pin assignment of the I/O link interface (M12 A-coded, pin)

Pin	Signal	Meaning
1	L+	+24 V supply voltage; from IO-Link master
2	-	Not used
3	L-	GND, reference potential for L+
4	C/Q	IO-Link data transmission channel

7.3   Pin assignment of the analog output
Figure 4   Pin assignment of the analog output (M12, A-coded, socket)

Pin	Assignment
1	+24 V, 100 mA
2	Not used
3	GND
4	Voltage output 0 V ... 10 V
5	Not used

8   Connection notes

Always connect the analog actuators using shielded twisted-pair cables.

9   Connection example
Figure 5   Connection example

10 Assembly
Figure 6   Connection of an actuator to an IO-Link master via the converter

- Connect the IO-Link interface of the converter to an IO-Link port of the higher-level IO-Link master using a standardized 3-pos. cable.
- Connect the analog actuator directly to the analog converter output or using a shielded 4-pos. cable.
- Fasten each connection using the M12 connectors.

> **i** In environments with high levels of interference, in particular, Phoenix Contact recommends connecting the converter to an appropriate functional earth ground point using an M4 screw.

11 Local status indicator
Figure 7   Local status indicator

Designation	Color	Meaning	State	Description
COM	Green	Status of IO-Link device	ON	Supply voltage OK
			Flash-ing	Supply voltage OK, SDCI communication active
			OFF	No supply voltage, no communication

12 Process data

The device occupies one word of IN process data and one word of OUT process data.

12.1 IN process data

The following data is transmitted in the input process data:

– During normal error-free operation, the output value is mirrored in the input process data for each channel.

– If an error occurs, the diagnostic message is mirrored in the input process data for each channel. The diagnostics message is deleted as soon as the error is eliminated.

Diagnostic messages in IB IL format

Code (hex)	Cause
8001	Overrange (Overflow)
8040	Device faulty
8080	Underrange (Underflow)

Diagnostic messages in S7-compatible format

Code (hex)	Cause
7FFF	Overrange (Overflow)
8000	Short-circuit/underrange (Underflow)

12.2 OUT process data

The output values are depicted in IB IL or S7-compatible format.

For both formats the output value is represented in bits 14 to 3. Bit 15 is available as a sign bit. Bits 2 to 0 are not relevant for the output value.

15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
V	Analog value												x	x	x

V   Sign bit (= 0, not relevant)

x   Not relevant for the output value (must be set to 0).

Parameterization

In addition, the device can be parameterized via the process data output word.

The following configurations are possible:

– Selection of formats for representing measured values

– Establishing substitute value behavior

15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Configuration	Reserved							Substitute value behavior in the event that IO-Link communication is aborted		Format		Reserved			

ℹ️ For the exact meaning of the individual bits, please refer to "Parameterization (80_{hex}: ParaWord)".

ℹ️ Output values in the range from 8000 ... BFFF are interpreted as parameters.

12.3   Parameterization via OUT process data

Reparameterization can be carried out via the output process data, however this is not saved permanently on the device.

> **i** Only carry out re-parameterization when starting up the device!

The following sequence applies regardless of the format (IB IL or S7-compatible):

–   The master interrupts the transmission of current process data and sends parameter data (OutputProcessData with bit 15 = 1)

> **(!)** In order to start configuration, bit 15 of the output word must be set to 1. If bit 15 = 0, the default configuration is active.

–   The device interrupts the transmission of current process data and responds with the following diagnostic code in the process data:

Code (hex)	Cause
8800	Parameter OK
8801	Parameter ERROR

–   If the diagnostic code is OK, the parameter data is accepted immediately. The master can end parameterization (OutputProcessData with bit 15 = 0). The device returns to normal operation with cyclic process data transmission.

–   In the event of the ERROR diagnostic code, the master can abort parameterization without modified parameter data (OutputProcessData with bit 15 = 0) or transmit the modified parameterization (return to step 1).

12.4   Example

The example applies for the following changes:

–   Switching the formats from S7-compatible (default) to IB IL

–   For "hold last value"

15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Configuration	Reserved							Substitute value behavior in the event that IO-Link communication is aborted		Format		Reserved			
1	Reserved							1	0	1	0	Reserved			

13   Significant values in various formats

13.1   IB IL format

Resolution: 1 bit (0000 -> 0008) corresponds to 2.67 mV

Output data		0 V ... 10 V
hex	dec	V
7F00	32512	10.837
7538	30008	10.00267
7530	30000	10.0
3A98	15000	5.0
0008	8	0.00267
0000	0	0

> **i** This device cannot output voltages < 20 mV.
> Only values from 0020 $_{hex}$ are supported.

> **i** In the event of overrange, 8001$_{hex}$ is displayed on the input data.
> In the event of overrange, 8080$_{hex}$ is displayed on the input data.
> In the event of short-circuit, 0 V is output and 8003$_{hex}$ is displayed on the input data.

13.2   Format S7 compatible

Resolution: 1 bit (0000 -> 0008) corresponds to 2.89 mV

Output data		0 V ... 10 V
hex	dec	V
7EF8	32504	11.756
6C08	27656	10.00289
3600	13824	5.0
0008	8	0.00289
0000	0	0

> **i** This device cannot output voltages < 20 mV.
> Only values from 0018 hex are supported.

> **i** In the event of overrange, 7FFF$_{hex}$ is displayed on the input data.
> In the event of underrange, 8000$_{hex}$ is displayed on the input data.
> In the event of short-circuit, 0 V is output and 8000$_{hex}$ is displayed on the input data.

14 IO-Link objects

14.1 Overview of the objects

Index (hex)		Index (dez)		Object name	Length in bytes	Access	Meaning	Contents
DPP	ISDU	DPP	ISDU					
Identification								
0007		7		Vendor ID	2	R	Vendor ID	00$_{hex}$
0008		8						B0$_{hex}$
0009		9		Device ID	3	R	Device ID	01$_{hex}$
000A		10						00$_{hex}$
000B		11						28$_{hex}$
	0010		16	VendorName	64	R	Vendor name	Phoenix Contact
	0011		17	VendorText	64	R	Notes	phoenixcontact.com
	0012		18	ProductName	64	R	Product name	AXL E IOL AO1 U M12 R
	0013		19	Product ID	64	R	Order No.	2700278
	0014		20	ProductText	64	R	Product text	IO-Link/analog converter voltage output rectangular
	0015		21	SerialNumber	16	R	Serial number	Stored in the production process.
	0016		22	HardwareVersion	64	R	Hardware version	E.g., 01
	0017		23	FirmwareVersion	64	R	Firmware version	E.g., 001
Diagnostics								
	0020		32	ErrorCount	2	R	Errors since power up	Number of errors
	0029		41	OutputProcessData	2	R	Output process data	Last current data
Parameter								
	0080		128	ParaWord	2	R/W	Parameterization	0000$_{hex}$

Abbreviation	Meaning
R	Read
W	Write

14.2   Parameterization (80$_{hex}$: ParaWord)

Parameterize the device using this object.

In the case of valid parameters, the parameterization is permanently stored on the device.

After a reset, the device operates with the last permanently stored data. Upon delivery, the device operates with the default data (default settings).

i	Saving data to the device leads to a communication failure of around 30 ms.

15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Reserved								Substitute value behavior in the event that IO-Link communication is aborted		Format		Reserved			

In the following tables the values in **bold** are default settings.

Format	
Code (bin)	**Meaning**
00	**S7-compatible**
10	IB IL
Other	Reserved

Substitute value behavior in the event that IO-Link communication is aborted	
Code (bin)	**Meaning**
00	**Output of zero value (0 V) at output**
01	Output of final value (10 V) at output
10	Hold last value
11	Reserved
Other	Reserved
