

Power supplies and UPS

2019/2020

Power for superior system availability

Our POWER products supply your applications with leading technology and high quality. Power supplies, DC/DC converters, redundancy modules, and uninterruptible power supplies are optimally tailored in terms of their functionality and design to the demands of various different industries.

With our QUINT, TRIO, UNO, and STEP product ranges, you are ideally equipped to handle competitors on an international scale.

The comprehensive solution for your control cabinet

The QUINT POWER product range is a part of the COMPLETE line. COMPLETE line is a system comprising coordinated hardware and software products, consulting services, and system solutions that help you optimize your processes in control cabinet manufacturing. Engineering, purchasing, installation, and operation become significantly easier for you. Further information is available on pages 76 to 79.

COMPLETE line

Innovative technologies

With our innovative technologies, we are decisively shaping the latest trends and developments. Phoenix Contact Power Supplies plays a leading technological role in the field of industrial power supplies.

- SFB Technology reliably trips standard miniature circuit breakers
- ACB Technology doubles the service life of redundant power supply units
- IQ Technology monitors and optimizes the energy storage system of the uninterruptible power supplies

Power supplies with SFB Technology (Selective Fuse Breaking)

- 6 times the nominal current for 15 ms
- Reliably switches off faulty current paths in the event of a short circuit
- Key system parts remain in operation without any interruption

For more information, refer to page 10 onwards.

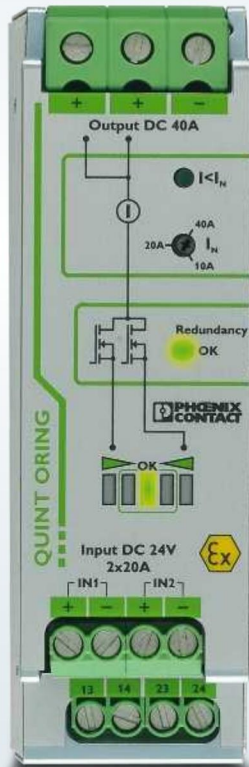

Auto Current Balancing Technology

Designed by PHOENIX CONTACT

Redundancy modules with ACB Technology (Auto Current Balancing)

- Even load distribution for redundant power supplies
- Lower thermal load on both power supplies
- Service life of the redundant solution is doubled

For more information, refer to page 34 onwards.

Uninterruptible power supplies for integration into industrial networks

- Battery management system (BMS) with IQ Technology
- Provides information on the remaining runtime, state of charge, and service life of the energy storage system
- Optimizes the charging characteristic for maximum service life
- Interfaces allow integration into any industrial network

For more information, refer to page 40 onwards.

Power supplies for every application

Our power supplies are used in a wide variety of sectors and industries. With their various functionalities, performance classes, and designs, they are the right partner for your application.

- QUINT POWER: Automotive industry, systems manufacturing, process industry, ship building
- TRIO POWER: Machine building
- UNO POWER: Electromobility
- STEP POWER: Urban infrastructure, building automation

Power supplies – A comparison of your advantages

The product ranges differ with regard to their design, power, and functionality. Select the ideal solution based on your requirements:

- QUINT POWER – Powerful, space-saving, and with maximum functionality
- TRIO POWER – Robust with standard functionality
- UNO POWER – Compact with basic functionality
- STEP POWER – For distribution boards

Shared features and differences

The power supplies of all the product ranges increase system availability and can be used worldwide, thanks to their international approval package and their wide range input.

All power supplies feature a high degree of operational safety, can be connected in parallel, and can also be installed without problems in outdoor control cabinets.

	QUINT POWER		TRIO POWER	UNO POWER	STEP POWER
	With SFB Technology	<100 W			
Can be used worldwide, thanks to the wide range input and international approval package	•	•	•	•	•
Maximum operating time, thanks to high MTBF >500,000 h at +40°C	•	•	•	•	•
Can be switched in parallel for increased performance and redundancy	•	•	•	•	•
Outdoor installation permissible, thanks to wide temperature range of -25°C ... +70°C	•	•	•	•	•
Active function monitoring via switching output for remote diagnostics	•	•	•		
Three-phase devices continue to operate without errors, even if one phase fails permanently	•		•		
Reliable starting of high loads with the dynamic boost power reserve	•	•	•		
Easy system extension with the static boost power reserve	•	•*			
Magnetic tripping of miniature circuit breakers, thanks to SFB Technology	•				
Preventive function monitoring reports critical operating states before errors occur	•	•			
Can be configured individually	•

QUINT POWER power supplies

Maximum functionality

Our powerful QUINT POWER power supplies with SFB Technology are ideally suited for ensuring the maximum availability of your system. The power reserve enables the trouble-free starting of high loads as well as the easy extension of your system. The combination of SFB Technology, preventive function monitoring, and long service life

increase the availability of your application. The range of features of QUINT POWER power supplies is rounded off with the individual configuration of signaling thresholds and characteristic curves. Furthermore, they can be ordered preconfigured from a batch quantity of just 1.

i Web code: #1513

Your advantages

- ✓ SFB Technology selectively trips standard miniature circuit breakers. Connected loads continue to work without interruption
- ✓ Preventive function monitoring reports critical operating states before they occur
- ✓ Power reserve for easy system extension, thanks to static boost with sustained power of up to 125%, and ability to start heavy loads, thanks to dynamic boost with up to 200% for 5 seconds
- ✓ High level of immunity, thanks to integrated gas discharge tube, more than 20 ms mains buffering
- ✓ Robust design in a metal housing and a wide temperature range of -40°C to +70°C

SFB Technology

SFB Technology (Selective Fuse Breaking) trips standard miniature circuit breakers reliably and quickly with up to six times the nominal current for 15 ms. Faulty current paths are switched off selectively, the fault is located, and important system parts remain in operation.

Designed by PHOENIX CONTACT

Can be configured individually

You can configure the power supplies easily and precisely using a PC or mobile device. For example, you can configure signaling thresholds and the output voltage, and adjust characteristic curves individually.

QUINT POWER Plus version – The power supply for maximum operational safety

The QUINT POWER Plus version with integrated decoupling MOSFET for 1+1 and n+1-redundancy provides symmetrical load distribution and maximizes system availability. Double overvoltage protection (OVP) switches the output off in the event of an error to protect the consumers against overvoltages.

The QUINT POWER Plus version satisfies the requirements in accordance with functional safety (SIL 3, HFT = 1 in accordance with IEC 61508 and IEC 61511), thus ensuring maximum operational safety. With a protective coating, and ATEX and IECEx approval in accordance with

the standards IEC 60079-0, IEC 60079-7, IEC 60079-11, and IEC 60079-15, it can also be used within potentially explosive areas of zone 2.

The new Plus version is rounded off with a wide temperature range of -40°C to +75°C for use under extreme ambient conditions.

Maximum protection for your system

For extreme operating conditions, use the ideally matched combination of PLUGTRAB SEC surge protection device and the powerful QUINT POWER power supply of the fourth generation.

However, should your fourth-generation QUINT POWER become damaged in the first five years following purchase despite the use of this combination, you will receive a free replacement.

Further information and conditions can be found on the Internet under Order Number [2907928](#) at www.phoenixcontact.com

QUINT POWER with SFB Technology for extreme environmental conditions

The PCB coating protects against dust, corrosive gases, and 100% humidity. Failures due to creepage currents and electrochemical migration caused by corrosion are also prevented. The components are protected within a wide temperature range of -40°C to +70°C.

DC/DC converters with the same properties can be found on page 26.

The QUINT S-ORING redundancy module for sensitive consumers, for example in process technology, with overvoltage protection (OVP) limits overvoltages to 28.8 V, and is also designed for extreme environmental conditions.

QUINT POWER power supplies up to 100 W

Powerful and space-saving

For the first time, QUINT POWER provides maximum system availability in the smallest size in the power range of up to 100 W. Preventive function monitoring and exceptional power reserves are now also

available for applications in the low-power range. Furthermore, you can choose between Push-in and screw connection technology for these power supplies for the low-power range.

i Web code: #1513

Your advantages

- ✓ Startup of high loads, thanks to dynamic boost
- ✓ Preventive function monitoring reports critical operating states before errors occur
- ✓ High efficiency and long service life with low power dissipation and low heating
- ✓ Space savings in the control cabinet, thanks to a narrow, slim-line design

TRIO POWER power supplies

Robust with standard functionality

The TRIO POWER power supplies are characterized by standard functionality, high quality, and reliability. They are ideally suited for use in machine building. All of the functions and the space-saving design are tailored to the stringent demands in

this area. The power supply units, which feature an extremely robust electrical and mechanical design, ensure the reliable supply of all consumers, even under harsh ambient conditions.

 Web code: #0497

Your advantages

- ✓ Very cost-effective, thanks to time-saving, tool-free Push-in connection, and thanks to a slim design
- ✓ Reliable startup of high loads, thanks to the dynamic power reserve, with 150% of the nominal current for a maximum of five seconds
- ✓ Electrically robust, thanks to high electric strength
- ✓ Mechanically robust, thanks to high vibration and shock resistance

TRIO CrossPowerSystem power supplies

The DIN rail with built-in power distribution

The new TRIO POWER power supply for the CrossPowerSystem power distribution board is ideally suited for use in machine building. All functions and the space-saving design are tailored to the stringent demands in this area.

Tool-free mounting and automatic contacting via convenient snap-on connections enable easy startup.

 **Web code: #2178**

The Push-in connection enables quick and easy connection of a 24 V DC control voltage.

Connection side of the power distribution board

Your advantages

- ✓ Push-in connection enables the quick and easy snap-on connection of a 24 V DC control voltage
- ✓ Rapid startup: tool-free mounting and automatic contacting in just one step (CrossPowerSystem)
- ✓ Reliable startup of high loads with dynamic boost
- ✓ Electrically robust, thanks to high electric strength
- ✓ Maximum flexibility, thanks to the wide temperature range of -25°C ... +70°C and device startup at -40°C

Product overview TRIO CROSS POWER power supplies

TRIO CROSS POWER 3~		
		
Input	3 x 400 ... 500 V AC

Order Number	1064922	

The perfect combination of two partners

Time is money – this is particularly true in the construction of machines and systems. Thanks to the combination of power distribution and switching devices, mounting on the power distribution board is now even faster. Furthermore, the integrated reverse pole protection prevents errors and ensures even simpler startup.

CONTACTRON with CrossPowerSystem

You can now reduce your wiring costs with the new TRIO CROSS POWER power supply. This can be used to supply power to all hybrid motor starters on the board at the same time.

Furthermore, to generate motor-relevant data for system monitoring, simply use the network-capable solution alongside the classic motor starters via IO-Link.

Power supplies

Device circuit breakers – Suitable for all applications

Increase the availability of your system by safeguarding the output voltage of your power supply. Protect your system effectively against overload and short-circuit currents at the same time.

The complete portfolio of electronic circuit breakers also provides intelligent protection. Take advantage of the easiest handling and simple product selection.

i Web code: #1646

i Web code: #1645

Your advantages

- ✓ The ideal device protection for any requirement, thanks to the comprehensive portfolio
- ✓ System statuses perfectly controlled, thanks to intelligent analysis and fault signaling
- ✓ Easy startup, thanks to tool-free connection technology and intuitive operation

UNO POWER power supplies

Compact with basic functionality

Thanks to their high power density, UNO POWER power supplies are the ideal solution, particularly in compact control cabinets. The efficient technology with low no-load losses and high efficiencies in a small housing covers loads from 25 W to 480 W.

This range of a total of 18 devices covers output voltages of 5 to 48 V DC and includes six designs. The UNO UPS uninterruptible power supply and the UNO DIODE redundancy module suitable for the power supply units are also available.

i Web code: #1512

Your advantages

- ✓ Maximum energy efficiency, thanks to high efficiency of up to 94% and thanks to extremely low idling losses of less than 0.3 W
- ✓ Particularly compact, thanks to high power density
- ✓ Outdoor installation possible with a wide temperature range of -25°C to +70°C

STEP POWER power supplies

Ideal for distribution boards

The STEP POWER power supplies have been specifically developed for building automation applications. They are ideally suited for distribution boards and shallow control panels. Thanks to their low no-load losses and high degree of efficiency, they achieve

maximum power efficiency in their class. The STEP UPS uninterruptible power supply and the STEP DIODE redundancy module suitable for the power supply units are also available.

i Web code: #1930

Your advantages

- ✓ Flexible assembly: snap onto the DIN rail or screw on a level surface
- ✓ Reliable power supply, thanks to a high MTBF of >500,000 h at +40°C, and U/I characteristic curve for the supply of capacitive loads
- ✓ Outdoor installation possible, thanks to the wide temperature range of -25°C to +70°C
- ✓ Save energy, thanks to maximum energy efficiency and incredibly low no-load losses

DC/DC converters For a regulated DC voltage

Avoid disturbances in your application by using DC/DC converters. The load is always supplied with a regulated DC voltage, even with long cable lengths. Phoenix Contact provides:

- DC/DC converters with SFB Technology and for extreme demands
- DC/DC converters for control technology
- DC/DC converters for photovoltaic applications

PHOENIX CONTACT 27

See the product details here

QUINT DC/DC converters

Adapt voltages

QUINT DC/DC converters change the voltage level and regenerate the voltage at the end of long cables. Furthermore, the electrical isolation ensures the establishment of independent supply systems. The SFB Technology, preventive function

monitoring, long service life, and IECEx approval maximize the availability of your application. For the first time, signaling thresholds and characteristic curves can be individually adapted. Furthermore, you can

choose the connection technology for the new generation.

i Web code: #0152

SFB
TECHNOLOGY

Your advantages

- ✓ Most powerful output side: easy system expansion, reliable startup of high loads, and miniature circuit breaker tripping
- ✓ Startup of high loads, thanks to dynamic boost of up to 200% for 5 s
- ✓ Most comprehensive signaling: preventive function monitoring reports critical operating states before errors occur
- ✓ Free selection between Push-in and screw connection
- ✓ Available preconfigured: from a batch quantity of just 1

Product overview MINI DC/DC converters

QUINT POWER voltage levels

The third generation of the QUINT DC/DC converters is suitable for high powers with currents up to 20 A.

Thanks to the large input voltage range, all common input and output voltages in the performance classes of up to 480 W are covered. The IECEx approvals for certain devices enable use in all industries, including the process industry.

QUINT DC/DC converters with a wide-range input are ideally suited, for example, for railway applications and in energy generation.

* AC power terminal for connection upstream of MINI DC/DC converters; the AC voltage of a transformer is rectified and filtered.

MINI POWER voltage levels

The DC/DC converters of the MINI POWER range are suitable for low powers. They are available for voltages from 10 to 75 V DC. They supply currents between 0.7 and 2 A. An LED and an active switching output monitor the output voltage.

MINI DC/DC converters are particularly suitable for measurement and control technology.

UNO DC/DC converters

For direct supply

Supply your control cabinet directly from the photovoltaic system with the DC/DC converters of the UNO POWER range. The Combiner Box is supplied directly from the PV panel, thanks to the direct connection to string voltages of up to 1000 V DC. You thus

save additional installation costs and increase system efficiency. In a further expansion stage, the signal line can be replaced by a wireless connection.

i Web code: #0152

Your advantages

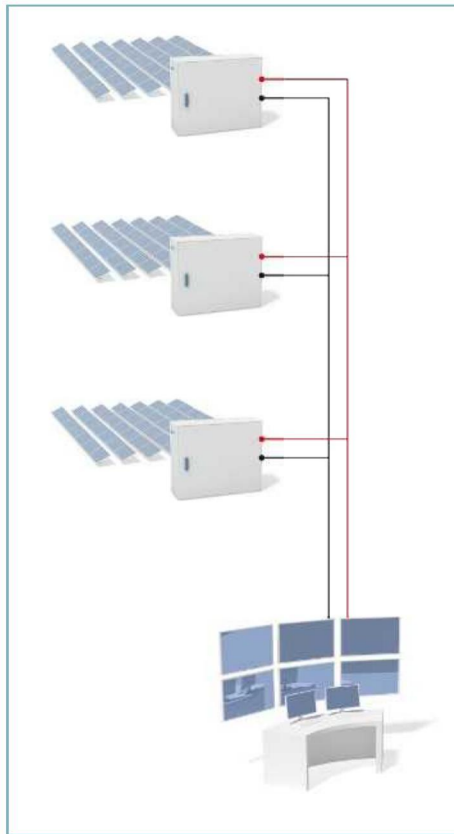

- ✓ Wide input voltage range of 300 V DC ... 1000 V DC
- ✓ Direct field installation possible, an AC connection is no longer necessary
- ✓ Simplified approval of the overall system, thanks to UL 1741 certification for the DC/DC converter
- ✓ Low space requirement in the control box, thanks to compact design and high degree of efficiency
- ✓ Simplified startup, thanks to LED function monitoring

Product overview UNO DC/DC converters

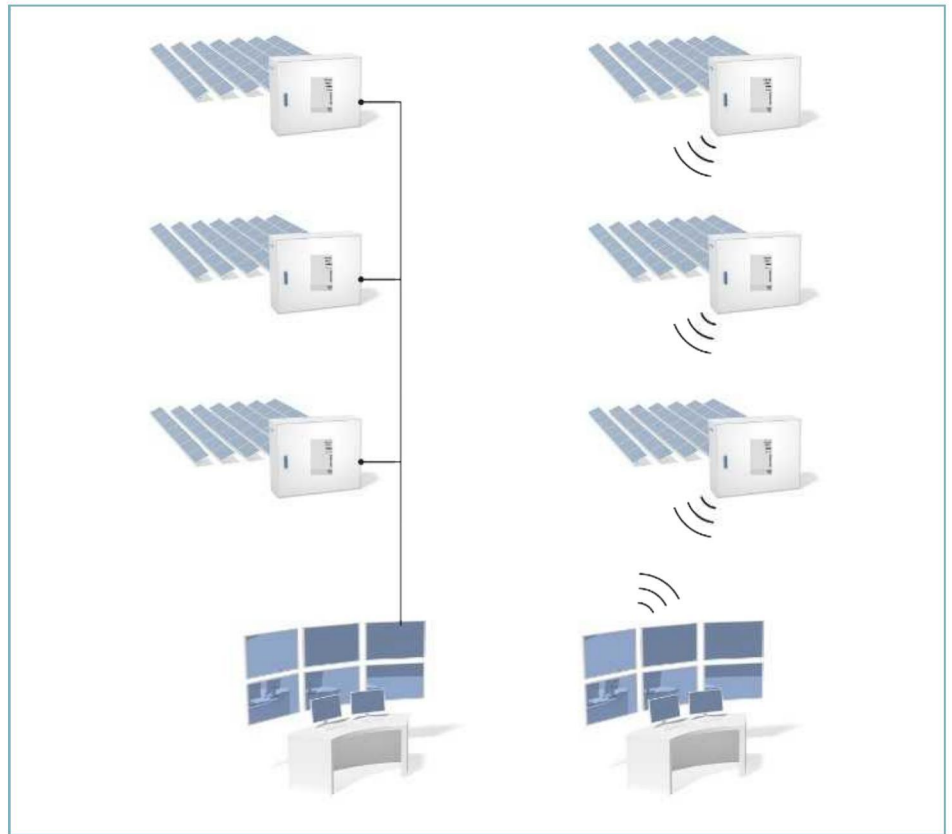

UNO DC/DC converters	
	
Input	350 ... 900 V DC
W x H x D in mm	55 x 90 x 84
	350 ... 900 DC / 24 DC / 60 W
Type	UNO-PS/350-900DC/24DC/60W
Order Number	2906300

Connection options for Combiner Boxes in photovoltaic systems

In the application shown, the Combiner Box is connected to a supply line (red, e.g. 230 V AC) and a signal line (black). Laying the lines involves significant installation costs.

UNO POWER devices allow direct connection to string voltages of up to 1000 V DC. This means that the Combiner Box is supplied directly from the photovoltaic panel, and additional installation costs are not incurred.

In a further expansion stage, the signal line can be replaced by a wireless connection.

Redundancy modules

Redundant power supply solutions are necessary in applications with the highest demands on operational safety. They ensure that the failure of one power supply unit does not result in system downtime.

A redundant system is the result of the parallel connection of two power supply units that are decoupled from one another. This decoupling via an active redundancy module or a simple diode ensures the high availability and productivity of your system.

Redundancy modules

QUINT SINGLE-ORING active redundancy modules

The QUINT S-ORING ensures superior system availability and maximum operational safety. Supply networks are decoupled and lines are disconnected continuously while they are routed to the load. In combination with the fourth generation of

the QUINT POWER power supplies, the input voltage and decoupling section are monitored continuously. The Plus version and the VP version with protective circuit and overvoltage protection protect sensitive loads.

Overvoltages are limited to <28.8 V or <30 V respectively.

 **Web code: #1513**

Your advantages

- ✓ Consistent redundancy through to the consumer
- ✓ Constant monitoring of input voltage and decoupling path
- ✓ Save energy by decoupling with MOSFET
- ✓ Protection against overvoltages at the output
- ✓ Protective coating with ATEX and IECEx approval for extreme environmental conditions

QUINT ORING active redundancy modules with ACB Technology

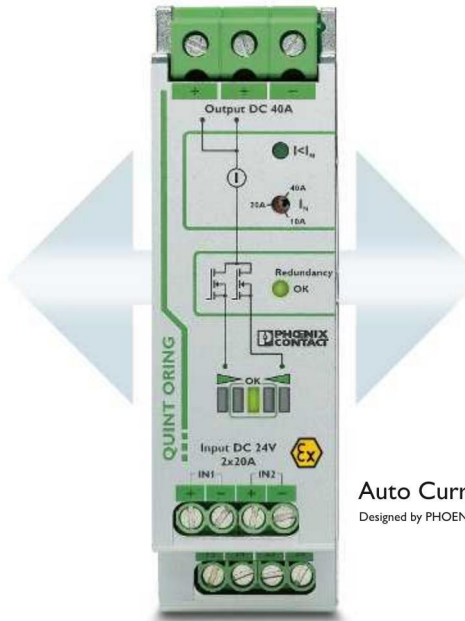

The ACB Technology (Auto Current Balancing) of the QUINT ORING modules extends the service life of redundantly operated power supplies by evenly utilizing the power supply units.

The three QUINT ORING modules feature preventive monitoring. The input voltage, output current, and decoupling path are monitored continuously, such that a loss of redundancy can be reported early on. Two positive output terminals ensure consistent redundancy through to the consumer. The installed MOSFETS reduce the power dissipation to the extent that energy savings of around 70% are achieved. Overvoltage protection limits surge voltages to 32 V.

As a result of asymmetries, the load is often supplied by just one power supply unit, while the other power supply unit runs in no-load operation. This results in a thermal load on the working power supply unit and therefore rapid aging.

The ACB Technology of the QUINT ORING modules ensures the symmetrical loading of the power supplies. The input voltage difference between the power supplies is continuously determined and automatically compensated up to a deviation of 300 mV. The load current is therefore distributed fully symmetrically. Thanks to the use of modern MOSFET technology, the

**50%
Power**

**50%
Power**

Auto Current Balancing Technology[®]
Designed by PHOENIX CONTACT

resulting thermal load is reduced by up to 70%. This lower level of power dissipation ensures that all the control cabinet components stay cooler and the service life of devices in the redundant system is doubled.

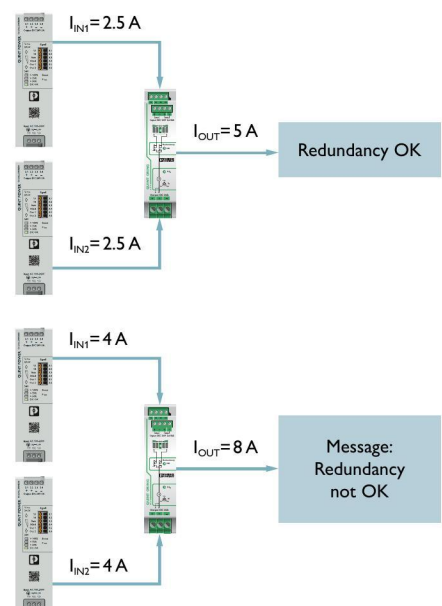

Detect and avoid critical states

The QUINT ORING modules monitor the load current and generate a warning as soon as a set value is exceeded. If the user connects additional loads to a redundant power supply as part of a system extension, this can result in the loss of redundancy. This is illustrated in the example scenario described below.

Two redundant power supplies each with 5 A nominal current supply a controller with the 5 A required.

If an additional load of 3 A is connected, this can be supplied by the power reserve of the power supply. The required current of 8 A is provided without a voltage dip.

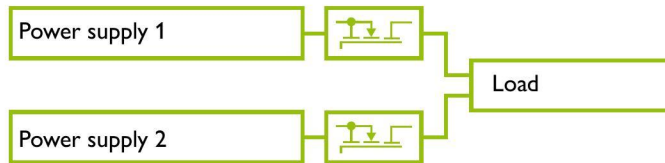

However there is no longer any redundancy: if one of the two power supplies fails, the second device is no longer able to provide 8 A. The LED immediately warns the system operator that there is no longer any redundancy.

Product overview Active redundancy modules

Decoupling and monitoring

Active, single-channel redundancy module for the separate structuring of a redundant system. In combination with the new QUINT POWER power supplies, your system is monitored continuously.

 Monitored
 Not monitored

Uninterruptible power supplies

Mains interruptions can have serious consequences. Do not take any risks. You can rely on our uninterruptible power supplies.

We provide the following solutions for optimum system availability, even in the event of a mains failure:

- DC and AC UPS modules with communication interfaces
- UPS modules with integrated power supply or energy storage system
- Comprehensive selection of energy storage systems

Uninterruptible power supplies

IQ Technology for an intelligent UPS system

Superior system availability, thanks to IQ Technology:

- You know the state of charge and remaining runtime of your energy storage system
- You will be warned of pending failures at an early stage, making it possible to plan servicing
- You can maximize the service life of the energy storage system
- All relevant information is available to you on your IPC and superordinate controllers

 Web code: #0154

The first intelligent QUINT DC UPS for integration into established industrial networks

Interfaces

The QUINT DC UPS can be easily integrated into the following existing industrial networks via various interfaces:

- PROFINET
- EtherNet/IP™
- EtherCAT®

All network technologies, devices with USB interface, and devices without an interface are available in all four performance classes (5 A, 10 A, 20 A, and 40 A).

2-port switch

Our QUINT DC UPS has a 2-port switch. The device can therefore be integrated flexibly into existing industrial networks.

Extended load management

The extended load management system consists of the following functions:

- Energy monitoring – Monitoring of input and output voltages and the associated currents
- PC shutdown function – Reliable shutdown of your IPC in the event of a mains failure without data loss, and automatic restart of the IPC when the power returns
- Cold-start function – UPS startup even without mains power

Function blocks

So that the QUINT DC UPS can be started up quickly, we include the corresponding function blocks for the following engineering environments:

- PLCnext
- TIA Portal
- Studio 5000
- TwinCAT

Device descriptions

If the appropriate function block for your application is not available, you can create your own custom function blocks using our device descriptions.

Intelligent charging

Adapts the charging current and thereby ensures the fastest possible recharging and availability.

Intelligent battery management SOC (State of Charge)

Describes the current state of charge and the remaining energy storage life.

Intelligent battery management SOH (State of Health)

Reports on the life remaining for the energy storage device, and warns of pending failures in good time.

Intelligent battery control

Detects the connected battery type and maximizes its remaining service life via an optimally adapted charging characteristic.

Uninterruptible power supplies

Intelligence in any combination

Create your own individual QUINT DC UPS solution – tailored to your application.

1. Choose your power supply
2. Choose your UPS module
3. Choose your energy storage system

Intelligence for superior system availability

Task

Supply an industrial PC consistently with 24 V DC.

Previous solution

One UPS with 3.4 Ah buffers 24 V DC / 5 A for 20 minutes under optimum conditions.

Can the energy storage system actually bridge this time? The state of charge, performance, and remaining runtime of the energy storage system are unknown.

Solution with QUINT UPS

The intelligent QUINT UPS determines all relevant energy storage system states. This ensures the crucial transparency required to guarantee the stability of the supply and optimum use of the energy storage system at all times.

The intelligent battery management detects the current state of charge of the connected energy storage and uses this to calculate the remaining runtime available.

The QUINT UPS indicates whether the remaining buffer time is actually 20 minutes. As soon as an adjustable threshold value is reached, a warning message is sent via signal contact, via software, or directly to superordinate controllers.

Power supply

UPS module

Energy storage system

Uninterruptible power supplies

QUINT UPS for DC and AC applications

The QUINT UPS for 24 V DC with output currents of 5 to 40 A is suitable for mains interruptions that last for up to several hours.

The QUINT UPS for AC applications delivers a pure sine curve at the output. The sine wave generated in battery operation is synchronized to the grid previously used for supply. Only one energy storage system is required to safeguard your system.

Uninterruptible power supplies

Energy storage systems for QUINT UPS

With the energy storage systems for our modular system of uninterruptible power supplies, you will always have the optimum solution for your system.

- UPS-CAP for maximum service life
- UPS-BAT/LI-ION for a long service life
- UPS-BAT/VRLA-WTR for use in extreme ambient temperatures
- UPS-BAT/VRLA for maximum buffer times

Your advantages

- ✓ Fast installation, thanks to automatic detection of the energy storage and tool-free replacement during operation
- ✓ Maximum availability, thanks to constant communication with the QUINT UPS for continuous monitoring and intelligent management
- ✓ Extremely long service life, thanks to the optimum charging characteristic, depending on the technology and ambient conditions
- ✓ Immediate availability: all energy storage systems leave our warehouse fully charged

UPS-BAT/VRLA... (Valve Regulated Lead Acid)

- Maximum buffer times
- Lead AGM technology (Absorbent Glass Mat)

Type	Typical buffer time	Temperature	Service life at +20°C	Service life at +50°C	Charging cycles at +20°C	Weight (standardized)
UPS-CAP...	<5 min	-40°C ... +60°C	>20 years	5 years	>500,000	0.4 kg
UPS-BAT/LI-ION...	>40 min	-20°C ... +58°C	15 years	2 years	7,000	0.45 kg
UPS-BAT/VRLA-WTR...	>5 h	-25°C ... +60°C	12 years	1.5 years	300	1.3 kg
UPS-BAT/VRLA...	>8 h	0°C ... +40°C	6 ... 9 years	1 year	250	1 kg

 Particularly good product characteristics

UPS-BAT/VRLA-WTR...
(Valve Regulated Lead Acid /
Wide Temperature Range)

- Maximum buffer times at extreme temperatures
- Pure lead AGM technology (Absorbent Glass Mat)

UPS-BAT/LI-ION...

- Long service life with long buffer times
- Lithium iron phosphate technology

UPS-CAP (capacitor)

- Maximum service life
- Maintenance-free double-layer capacitors

Uninterruptible power supplies

QUINT DC UPS with IQ Technology – For industrial networks

The first intelligent UPS with integrated Ethernet interface for integration into established industrial networks. The UPS modules for 24 V DC with output currents ranging from 5 to 40 A allow you to create a custom solution combining a power

supply, UPS module, and energy storage. With its IQ Technology and the industry's most powerful battery charger, the battery management system (BMS) ensures superior system availability.

i Web code: #1992

Your advantages

- ✓ Evaluation of the state of health (SOH) and state of charge (SOC), thanks to the intelligent battery management system (BMS)
- ✓ Automatic recognition of the battery capacities and technologies (VRLA, WTR, LiFePO4)
- ✓ Monitoring of output current and voltage, as well as manual connection and disconnection of the system
- ✓ SFB Technology selectively trips standard miniature circuit breakers; consumers connected in parallel continue working

Uninterruptible power supplies

QUINT UPS – Intelligent and communicative

With the intelligent QUINT DC UPS for integration into existing industrial networks, you are ready for Industrie 4.0.

With the QUINT DC UPS and the integrated interfaces for PROFINET, EtherNet/IP™, EtherCAT®, and USB, monitoring,

configuration, and shutting the system down in a safe state are possible at all times and anywhere in the world.

Signaling

LEDs and floating relay contacts provide function monitoring. QUINT UPS supplies the following information via the wired contacts:

- The load is being supplied by the energy storage
- The energy storage system is being charged
- An alarm is present

Intelligent monitoring of the energy storage system

- Automatic recognition of the battery type connected and maximization of the service life, thanks to optimally adjusted charging characteristics
- Adapting the charging current ensures the quickest possible recharging and availability of the energy storage system

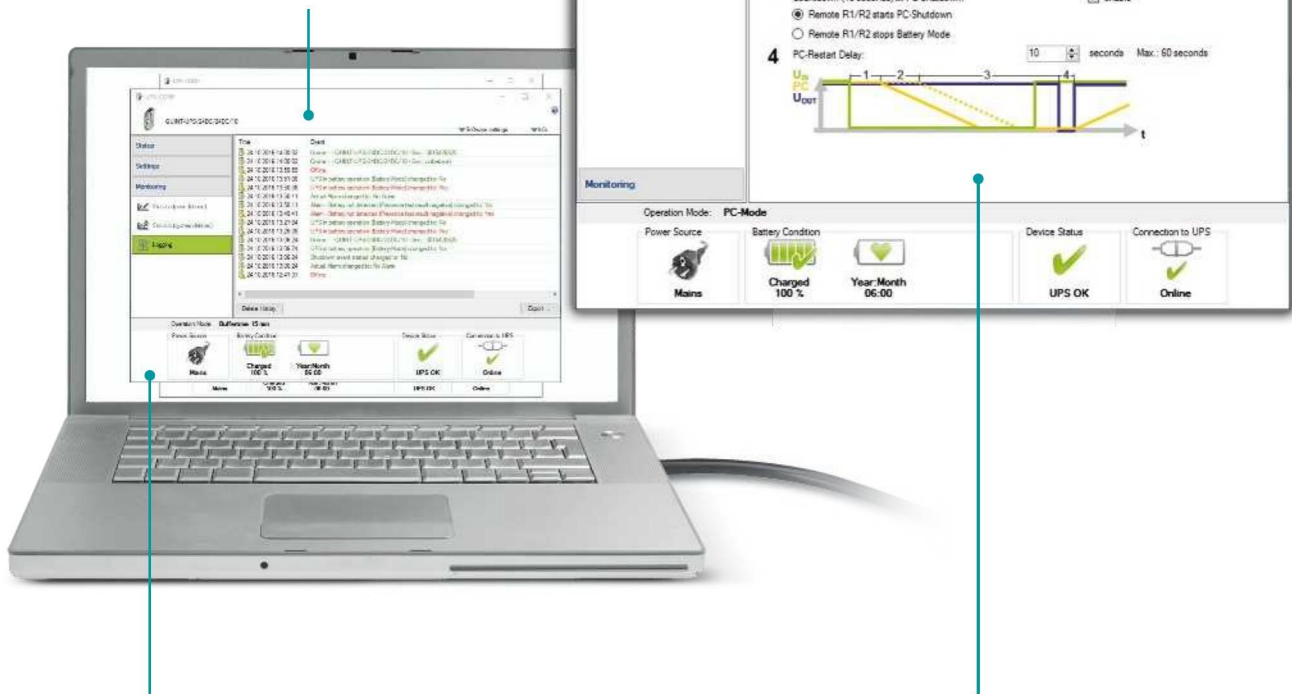

The USB interface is ideal for

- Monitoring and configuration with UPS-CONF
- Safe shutdown of industrial PCs with optimum utilization of the energy storage system
- Automatic startup when mains returns

Configuration

Flexible adaptation of QUINT UPS behavior to individual requirements.

Integrated data recorder

The log file archives events, e.g., when and for how long the QUINT UPS has bridged mains failures.

The software is available free of charge as a download on the Phoenix Contact website under "Downloads" on the QUINT-UPS/... product pages

Preventive function monitoring

All relevant operating parameters are displayed graphically, and important messages appear in the foreground.

User-friendly integration into your network

Function blocks

We include the appropriate function blocks for the following engineering environments with every delivery:

- PLCnext
- TIA Portal
- Studio 5000
- TwinCAT

Device descriptions

Create your own custom function blocks for your controller using our device descriptions.

The library is available free of charge on the Phoenix Contact website under "Downloads" on the QUINT-UPS/... product pages.

Selection guide for QUINT UPS modules with integrated energy storage system

QUINT UPS

Particularly space saving and easy to install in existing systems. Simply connect a 24 V DC power supply unit upstream and the UPS solution is complete. Utilize the benefits of IQ Technology and the minimum wiring outlay. The maintenance-free energy storage device is integrated.

Buffer modules

The QUINT BUFFER and QUINT CAP are both suitable for the DIN rail and combine an electronic switch-over unit and maintenance-free, capacitor-based energy storage system in the same housing.

QUINT BUFFER

The compact buffer module for bridging failures in the seconds range.

QUINT CAP

QUINT CAP for cyclic failures of up to 30 seconds. Your PC can be shut down conveniently thanks to the USB interface.

Selection guide for UPS modules with integrated energy storage system

Particularly space-saving

UPS module and energy storage system combined in one housing. Just one power supply needs to be connected upstream.

The energy storage systems can of course be replaced quickly and easily when they reach the end of their service life.

TRIO AC UPS

The TRIO AC UPS with Push-in Technology for the DIN rail saves space and reliably supplies your AC loads. It delivers a pure sine curve at the output. The sine wave generated in battery operation is synchronized to the grid previously used for supply. Connected industrial PCs can be shut down via the integrated USB interface.

i Web code: #1987

UNO UPS

Compact and narrow, the UNO UPS with integrated lead AGM energy storage system ensures long buffer times.

STEP UPS

The STEP DC UPS has been designed specifically for use in distribution boards. It requires just a minimal space of 198 mm on the DIN rail.

i Web code: #1990

Selection guide for UPS modules with integrated power supply

Small and flexible

The MINI UPS and TRIO UPS combine a power supply and electronic switch-over unit in the same housing. They ensure the operation of DC loads in the event of mains faults. Just one energy storage system is required to complete the UPS system.

i Web code: #1991

MINI UPS

The MINI UPS, with its comprehensive signaling functions, is always used in applications where space-saving solutions are needed. The energy storage systems with lead AGM technology enable buffer times at nominal load of up to 40 minutes at output voltages of 24 V DC or 12 V DC.

TRIO UPS

Supply DC loads reliably and save space with the new uninterruptible TRIO power supplies. An input grid is no longer necessary for startup. Connected industrial PCs can be shutdown easily via the integrated USB interface.

COMPLETE line – The comprehensive solution for the control cabinet

COMPLETE line is a system comprising technologically leading and coordinated hardware and software products, consulting services, and system solutions that help you optimize your processes in control cabinet manufacturing. Engineering, purchasing, installation, and operation become significantly easier for you.

i Web code: #2089

Your advantages in detail:

Comprehensive product portfolio

With COMPLETE line, we offer a complete product portfolio of technologically leading products. This includes:

- Controllers and I/O modules
- Power supplies and device circuit breakers
- Terminal blocks and distribution blocks
- Relay modules and motor starters
- Signal conditioners
- Safety technology
- Surge protection
- Heavy-duty connectors

Intuitive handling

Thanks to the simple, intuitive handling of the coordinated hardware components, you will save time during installation, startup, and maintenance. Push-in connection technology enables you to wire applications quickly – without using tools. The broad, technologically leading product portfolio will always provide you with the right product for standard or special applications.

Time savings across the entire engineering process

The PROJECT complete planning and marking software supports the entire process of control cabinet manufacturing. The program features an intuitive user interface that enables the individual planning, automatic checking, and direct ordering of terminal strips.

Reduced logistics costs

Reduced variety of parts, thanks to standardized marking, bridging, and testing accessories. The COMPLETE line system coordinates products, design, and accessories so that you benefit from maximum reusability and thus reduce your logistics costs.

Optimized processes in control cabinet manufacturing

COMPLETE line supports you, from engineering through to manufacturing, in designing your control cabinet production as efficient as possible. Thus, your customized concept for optimizing your processes in control cabinet manufacturing is created. Our terminal strip production helps you to flexibly manage order peaks or to supply your control cabinet production with fully assembled DIN rails just in time.

The new standard for the control cabinet

Discover the extensive COMPLETE line product portfolio and find out more about COMPLETE line and your comprehensive solutions for the control cabinet.

Worldwide service and support – We are there for you

At Phoenix Contact, the focus is always on you, the customer. With over 50 subsidiaries around the world and more than 30 agencies, we are always close by.

As a result, you receive verified, first-hand advice and benefit from fast and timely delivery of a complete package consisting of high-grade, optimally coordinated components. Our expertise and the high levels of production depth allow customized solutions tailored to you. We will also support you after the purchase with comprehensive after-sales services.

78 PHOENIX CONTACT

Your advantages in detail:

Fast terminal strip production

The terminal strip production service provides help in managing order peaks flexibly, and enables terminal strips to be delivered just-in-time for series production. The fully assembled and marked terminal strips, already equipped with accessories, then simply have to be installed and connected.

Individual set solutions

To reduce the effort of materials and stock management, you can order pre-picked material sets under a single order number.

Customer-specific solutions

Can't find what you're looking for in our range? No problem: from minor adaptations to completely new product developments, we focus on your specific requirements.

Global approvals and certificates

Our numerous certificates are proof that you can put your full trust in our products, because quality is essential. We strive to satisfy this requirement in every respect. For this reason, our systems, processes, and products are inspected and certified several times over.

Comprehensive after-sales services

We are there for you – not just before your purchase, but also afterwards with our comprehensive after-sales services. This includes a repair service, a replacement service, and a spare part service.

Comprehensive training program

From the basics to specialist expertise: we will provide you with the skills you need to the extent and configuration you require.

In dialog with customers and partners worldwide

Phoenix Contact is a globally present, Germany-based market leader. Our group is synonym for future-oriented components, systems, and solutions in the fields of electrical engineering, electronics, and automation. A global network across more than 100 countries, and 17,400 employees ensure a close proximity to our customers, which we believe is particularly important.

The wide variety of our innovative products makes it easy for our customers to find future-oriented solutions for different applications and industries. We especially focus on the fields of energy, infrastructure, process and factory automation.
