Edge control for Industrial IoT

Modicon IIoT-native edge controllers manage complex interfaces across assets and devices or directly into the cloud, with embedded functional safety and cybersecurity. Modicon provides performance and scalability for a wide range of industrial applications up to high-performance multi-axis machines and high-available redundant processes.

To be competitive in today's digital era, machine builders must be innovative. Smart machines, those that are better connected, more flexible, more efficient, and safe, are enabling machine builders to innovate in ways never before possible.

EcoStruxure, Schneider Electric's open, IoT-enabled architecture and platform, offers powerful solutions for the digital era. As part of this, EcoStruxure Machine brings powerful opportunities for machine builders and OEMs, empowering them to offer smart machines and compete in the new, digital era.

EcoStruxure Machine brings together key technologies for product connectivity and edge control on premises, and cloud technologies to provide analytics and digital services. EcoStruxure Machine helps you bring more innovation and added value to your customers throughout the entire machine life cycle.

Innovation at Every Level for Machines is full systems across three layers:

- Connected products
Our connected products for measuring, actuating, device level monitoring, and control adhere to open standards to provide unmatched integration opportunities and flexibility
- Edge Control
We are IIoT-ready with a proven set of tested and validated reference architectures that enable the design of end-to-end open, connected, and interoperable systems based on industry standards. Ethernet and OPC UA facilitates IT/OT convergence meaning machine builders reap benefits from web interfaces and cloud.

- Apps, Analytics & Services
Seamless integration of machines to the IT layer allows the collection and aggregation of data ready for analysis – for machine builders and end users alike this means increased uptime and the ability to find information faster for more efficient operations and maintenance.

These levels are completely integrated from shop floor to top floor. And we have cloud offers and end-to-end cybersecurity wrapped around.

EcoStruxure Machine makes it easier for OEMs/ machine builders to offer their customers smarter machines. The advent of smart machines is driven by the changing needs of end users:

- Evolving workforce
- Reducing costs
- Dynamic markets
- Shorter life cycles
- Prioritizing functional safety and cybersecurity

EcoStruxure Machine provides one solution for the whole machine life cycle:

- With Smart Design & Engineering the time to market is reduced by up to 30% using our automated engineering and the simulation capabilities
- During Commissioning & Operation of the machine, resources such as energy, material and loss can be improved, and with seamless integration to the IT world efficiency can be improved by up to 40%
- Smart Maintenance & Services reduces the time for corrective actions up to 50%

EcoStruxure™ Machine

Modicon TM5

High-Performance and Safe IP20 Modular I/O System

Machine Automation

Machine Automation

Machine control

> From basic to motion- and robot-centric machines with the PacDrive 3 offer, Modicon controllers and solutions bring a consistent and scalable response to achieving flexibility, performance, productivity and digitization.

The scalability and consistency of I/O ranges allow you to select the right offer depending on your needs

> Modicon TM3 Optimized I/O system for more compact and modular machines
 > Modicon TM5 for more performance-demanding machines, with Modicon TM7 for harsh environments: Both Performance I/O ranges (Modicon TM5 and Modicon TM7) allow safety functions to be implemented using Modicon TM5CSLC●00FS safety logic controller

Embedded Safety provides holistic solutions to Modicon M262 and PacDrive 3 LMC motion controllers, increasing overall safety demand in Machine Automation

> Modicon TM5CSLC●00FS safety logic controllers are suitable safety option for Medium to large size applications with Motion safety functions
 > Harmony XPS Universal safety modules cover a wide range of safety functions, suitable for small applications with 4-5 safety functions, with diagnostic information provided to controllers via a single wire connection
 > Modicon TM3 safety functional modules are suitable for small applications covering E-Stop functions and diagnostics via TM3 I/O bus
 > Modicon MCM modular safety controllers are suitable for medium size applications with up to 64 dual channel safety functions and diagnostics via Modbus TCP, Modbus RTU, EtherNet/IP, CANopen, EtherCAT and Profibus

All of those devices are managed within a single software, **EcoStruxure Machine Expert**, a powerful and collaborative engineering environment

> EcoStruxure Machine Expert – Safety: an optional addon for programming TM5CSLC●00FS safety logic controllers
 > EcoStruxure Machine Expert – Basic: a software for programming Modicon M221 logic controllers, an intuitive standalone environment accessible to basic skilled technicians
 > EcoStruxure Machine Advisor: a cloud-based services platform designed for machine builders to track machines in operation worldwide, monitor performance data and resolve exceptional events

Machine Automation

Comprehensive Schneider offers for machine builders

- > Lexium servo drives, motors and robotics are designed to control applications ranging from a single independent axis up to high-performance synchronized multi-axis machines requiring high-speed and precise positioning and movements

- > The Lexium offer is designed for a broad range of motion-centric machines in applications such as [Packaging](#), [Material Handling](#), [Material Working](#), [Food and Beverage](#) and Electronics

- > Schneider Electric has developed Tested Validated & Documented Architectures (TVDA) applicable for generic machine control applications as well as for dedicated segment applications such as Packaging, Material Working, Material Handling, Hoisting, Pumping, or generic [Machine Control applications](#)

Choose Schneider Electric to help secure your investment and benefit from worldwide services at every step of your project

- > From planning and inception to modernization, we help ensure optimal technical and business performance. Our field service engineers combine 30+ years of manufacturer-level experience with the latest technology to bring innovation to every level of our offer and every step of your project.
- > Our machine control dedicated services empower you to maximize your business infrastructure and face increasingly stringent demands on productivity, safety, equipment availability and performance optimization.

Modicon TM5

High-Performance and Safe IP20 Modular I/O System

Modicon TM5 range

Modicon TM5 range

The Modicon TM5 offer has been developed to create flexible, scalable I/O configurations for automation solutions based on Modicon and PacDrive controllers:

- Modicon M241, M251, and M258 logic controllers
- Modicon LMC058 and LMC078 motion controllers
- Modicon M262 logic/motion controllers
- PacDrive LMC Eco/Pro2 motion controllers

This offer also includes two safety controllers and safety I/O modules compatible with the Modicon M262 logic/motion controller and PacDrive LMC Eco/Pro2 motion controllers.

The Modicon TM5 I/O system is fully compatible with **EcoStruxure Machine Expert** software.

This I/O system is made up of blocks and expansion modules, offering the following advantages:

- Simplified installation and maintenance
- Embedded diagnostics for local and remote supervision
- Hot swapping of I/O modules
- Ease of wiring provided by spring terminals and removable terminal blocks

I/O expansion modules

- Digital I/O modules and compact digital input blocks, see [pages 10 to 17](#)
- Digital/analog I/O modules, see [page 13](#)
- Analog I/O modules, see [pages 18 to 13](#)
- Counter modules, see [pages 22 to 25](#)
- Transmitter and receiver modules for remote extension via the TM5 bus, see [page 26](#)
- IO-Link master module, see [page 28](#)
- Communication module for RS232 serial link, see [page 30](#)
- Common distribution modules, see [page 32](#)
- Power distribution modules, see [page 33](#)

Expansion modules comprise three parts to be ordered separately:

- An electronic module
- A bus base
- A terminal block

Safety controllers and modules

Modicon TM5 safety modules are associated with Modicon TM5CSLC●00FS safety logic controllers to provide distributed safety solutions on the Sercos III bus up to SIL 3 conforming to IEC 61508, Cat. 4, PLe conforming to ISO 13849-1, and SIL CL3 conforming to IEC 62061, see [pages 34 to 36](#).

Modicon TM5 safety offer comprises:

- Safety logic controllers
- Safety digital input and output modules
- Safety analog input modules
- Safety counter module

Communication interface module for distributed I/O

- Ethernet network interface module for distributed I/O over Ethernet, see [pages 40 and 41](#)
- CANopen fieldbus interface module for distributed I/O on the CANopen bus, see [pages 42 and 43](#)
- Sercos bus interface module for distributed I/O on the Sercos III bus, see [pages 44 and 45](#)

Each communication interface module comprises four parts to be ordered separately:

- A network or bus base
- An interface electronic module
- A power distribution electronic module
- A removable terminal block

TM7 blocks

Modicon TM7 is an IP67 modular I/O system comprising digital and analog I/O blocks, including safety I/O. The TM7 blocks complement distributed I/O architectures by using the product at the heart of machines in harsh environments (where there is a risk of splashing water, oil, dust, etc.). Please refer to the catalog ref. [DIA3ED2140405EN](#).

Modicon TM5

High-Performance and Safe IP20 Modular I/O System

Modicon TM5 expansion system

Modicon TM5 expansion system

EcoStruxure Machine Expert software is used to configure local and remote I/O and distributed I/O islands.

Local and remote I/O configuration

With Modicon M258 logic controller and Modicon LMC058 motion controller only

- 1 Modicon M258 logic controller
- 2 Compact I/O blocks
- 3 I/O expansion modules
- 4 Transmitter module/Receiver module
- 5 TM5 expansion bus cable
- 6 Common distribution modules

- Local I/O: Compact blocks represent a way of adding a large number of I/O using a single component, and thus a single product reference. I/O expansion modules complete this configuration and, being modular with between 2 and 12 channels, make it possible to adjust the number of channels to exactly that required. The addition of digital, analog, temperature, or high-speed counter modules increases the processing capabilities of applications.
- Remote I/O: Because of its backplane bus management, Modicon TM5 system can be used to control I/O modules remotely.
 - The same modules can be used in a local and remote configuration, linked together via TM5 expansion bus cables.
 - The maximum distance between 2 islands is 100 m (328 ft) and the maximum number of islands is 25, i.e. a total distance of 2,500 m (8,202 ft). This ensures a high degree of flexibility, while maintaining synchronized data acquisition, since all the expansion modules are on the same backplane bus.

Distributed I/O configuration

With Modicon M241 and Modicon M251 logic controllers, Modicon M262 logic/motion controllers, and PacDrive LMC Eco/Pro2 motion controllers

Modicon TM5 system offers the option to create distributed I/O islands on the following networks and buses:

- With the **Ethernet** network interface module, see [page 40](#)
- With the **CANopen** bus interface module, see [page 42](#)
- With the **Sercos** bus interface module, see [page 44](#)

Example: distributed I/O configuration over Ethernet

- 1 a Modicon M241 logic controller b Modicon M251 logic controller c Modicon M262 logic/motion controller d PacDrive LMC Eco/Pro2 motion controllers: Ethernet network masters
- 2 TM5 Ethernet interface module (slave) (a) + TM5 modules (b) + TM5SBET1 (c1)/TM5SBET7 (c2) transmitter modules
- 3 TM5SBER2 receiver module (d) + TM5 I/O modules (b)
- 4 TM5 expansion bus: TCSXCNNXNX100 remote I/O cable
- 5 Modicon TM7 blocks (1) (digital or analog I/O) (e) + TM7TCSXC�●●●E bus expansion cable (f)

(1) Modicon TM7, please refer to catalog ref. [DIA3ED2140405EN](#)

Presentation

The digital module offer comprises:

- Input, mixed I/O, and output electronic modules (24 V $\bar{\square}$ sensor and preactuator power supply): **TM5SDI●●●**, **TM5SDO●●●**
- A mixed I/O module with timestamping and oversampling functions: **TM5SDM8DTS**. The timestamping function is used to associate a date and time with an event, and to record the time the operation was performed. **TM5SDM8DTS** electronic module was designed to be used with the PacDrive system and **TM5NS31** Sercos bus interface (1) only.
- A mixed digital/analog I/O electronic module: **TM5SMM6D2L**

These modules are used to adapt as closely as possible to the application requirements to reduce installation and wiring costs.

Each digital and digital/analog module comprises three parts to be ordered separately (2):

- An I/O electronic module
- A bus base
- A terminal block

These modules can be mechanically assembled before mounting on a symmetrical rail.

They offer the following advantages:

- Removable terminal block
- Spring terminals that can be used for quick, tool-free connection of the sensors and preactuators (the quality of the spring terminals avoids the need for periodic retightening)
- Hot swapping capability

Description

TM5SD●●●● digital modules and **TM5SMM6D2L** digital/analog module comprise:

- 1 A bus base
- 2 A mechanical clip for locking onto a symmetrical rail
- 3 A bus expansion connection on each side of the base to provide the link with the adjacent controller or module
- 4 A digital input, output, or I/O electronic module
- 5 An LED display block for the module channels and diagnostics
- 6 A slot for the plain text cover holder (label holder)
- 7 A removable spring terminal block with locking clip and slots for colored ID markers

24 V $\overline{\text{DC}}$ digital compact blocks

Presentation

TM5C●●●● compact blocks offer a cost-effective solution for expanding control system I/O configurations.

They consist of a block containing the circuit boards, bus bases, and **TM5ACTB12** removable terminal blocks.

- They are a cost-effective way of creating configurations that require a large number of digital channels.

- Regardless of which compact block is chosen, the format is the same and corresponds to five I/O expansion modules.

Description

TM5C●●●● compact blocks comprise:

- 1 A bus expansion connection on each side of the base to provide the link with the adjacent controller or block
- 2 Two mechanical clips for locking onto a symmetrical rail
- 3 Five LED display blocks for the compact block's channels and diagnostics
- 4 Five slots for the plain text cover holder (label-holder)
- 5 Five removable spring terminal blocks, each with locking clip and slots for colored ID markers (supplied with the compact blocks)

Analog modules

Presentation

TM5SAI●●● and **TM5SEIAISG** analog input modules are used to acquire various analog values encountered in industrial applications.

TM5SAO●●● analog output modules are used to control preactuators in physical units, such as variable speed drives or valves, and applications where process control is required. The output current or voltage is proportional to the numerical value defined by the user program.

When the controller stops, the outputs can be configured to fall back (set to the low scale value or held at their value). This function, when set to 'hold', is useful when debugging the application or when a fault occurs, so as not to disturb the process being controlled.

Depending on the application requirements, these modules are available with 12-, 16-, or 24-bit resolution.

Each analog module comprises three parts to be ordered separately (1):

- An input or output electronic module
- A bus base
- A terminal block

These modules can be mechanically assembled before mounting on a symmetrical rail. They offer the following advantages:

- Removable terminal block
- Spring terminals that can be used for quick, tool-free connection of the sensors and preactuators (the quality of the spring terminals avoids the need for periodic retightening)
- Hot swapping capability

Use of the **TM2XMTGB** grounding plate is recommended. This simplifies connection of the cable shielding for the analog sensors and actuators (shielding must be connected to the device's functional ground).

Description

The analog modules comprise:

- 1 A bus base
- 2 A mechanical clip for locking onto a symmetrical rail
- 3 A bus expansion connection on each side of the base to provide the link with the adjacent controller or module
- 4 An analog input or output electronic module
- 5 An LED display block for the module channels and diagnostics
- 6 A slot for the plain text cover holder (label holder)
- 7 A removable spring terminal block with locking clip and slots for colored ID markers

Modicon TM5

High-Performance and Safe IP20 Modular I/O System Counter modules

Presentation

TM5SDI12DF and TM5SE●●●●●● modules are used to count the pulses generated by a sensor or to process signals from an incremental encoder, depending on the selected reference.

The breadth of the TM5 counter modules offer makes it possible to adapt the configuration to the machine's exact requirements: the counter electronic modules differ in terms of their frequency and the functions offered.

The function parameters are configured using EcoStruxure Machine Expert software.

Each TM5 counter module comprises three parts to be ordered separately:

- A counter electronic module
- A bus base
- A terminal block

These modules can be mechanically assembled before mounting on a symmetrical rail. They offer the following advantages:

- Removable terminal block
- Spring terminals that can be used for quick, tool-free connection of the sensors and preactuators (the quality of the spring terminals avoids the need for periodic retightening)
- Hot swapping capability

High-Performance and Safe IP20 Modular I/O System

Transmitter and receiver modules

Presentation

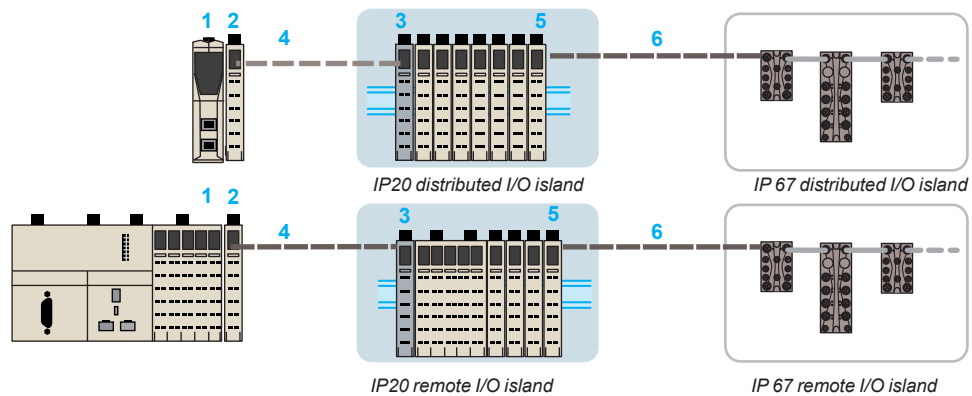

Transmitter and receiver modules are used to create remote and distributed I/O islands via the TM5 expansion bus. This makes it possible to:

- Adapt the architecture as close as possible to the machine topology, and reduce wiring costs by minimizing the distance between the I/O modules and the sensors/preactuators
- Take full advantage of the TM5 expansion bus exchange performance, and save the cost of a fieldbus connection

Remote I/O modules are needed to:

- Increase the number of distributed I/O with a network interface module (Ethernet, Sercos, or CANopen) beyond 100 m/328 ft (1)
- Increase the number of remote I/O with a logic controller beyond 100 m/328 ft (1)

They are used to exchange incoming and outgoing data from the I/O expansion modules, and to maintain data exchange performance.

- **TM5SBET1** transmitter module (2) operates with **TM5SBER2** receiver module (3) to transmit data between IP20 I/O islands. The transmitter (2) and receiver (3) modules are physically connected via **TCSXCNNXN100** remote I/O cable (4).
- **TM5SBET7** transmitter module (5) transmits data from an IP20 island to an IP67 island (1) via a TM7 expansion bus (6).

The maximum distance between two islands is 100 m (328 ft) and the maximum total distance is 2,500 m (8,202 ft).

Each remote I/O module comprises three parts to be ordered separately:

- A remote electronic module, either transmitter or receiver
- A bus base
- A terminal block

These modules can be mechanically assembled before mounting on a symmetrical rail.

They offer the following advantages:

- Removable connector
- Spring terminals that can be used for quick, tool-free connection of the sensors and preactuators (the quality of the spring terminals avoids the need for periodic retightening)

High-Performance and Safe IP20 Modular I/O System
IO-Link master module

Presentation

■ IO-Link is a point-to-point industrial communications networking standard (IEC 61131-9) used for connecting digital sensors and actuators to either a type of industrial fieldbus or a type of industrial Ethernet. IO-Link offers possibilities for communication between the control and the machine level: sensors and actuators actively participate in the process within a cohesive automation network:

- transmitters independently report errors and states to PLCs
- receivers receive inverted signals and process them.

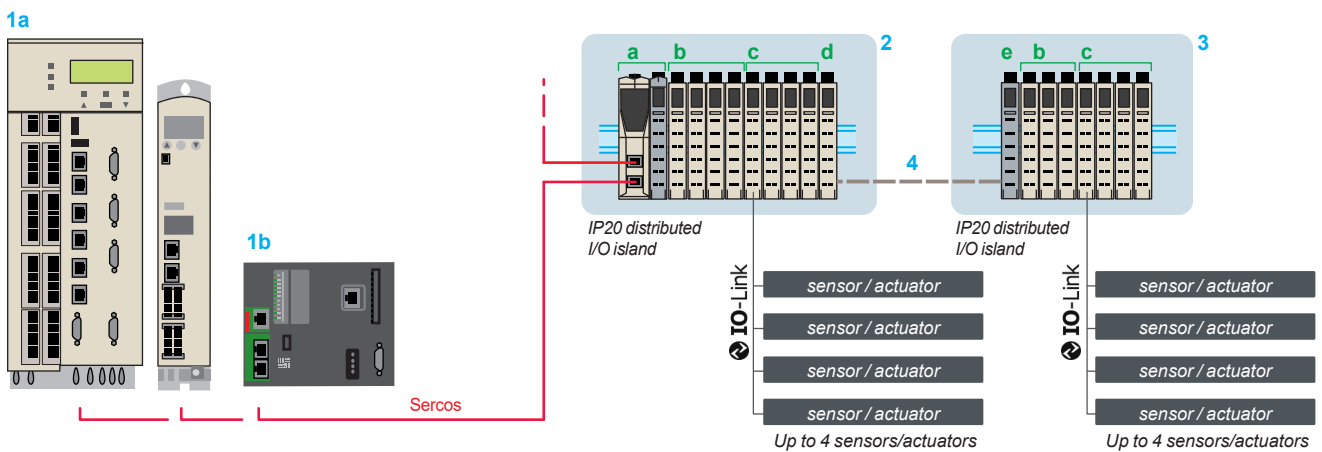

The result: cost and process optimization across the entire supply chain, across all sectors.

■ **TM5SE4IOL** IO-Link master module allows to connect intelligent devices (sensors and actuators) to the TM5 system in accordance with the IO-Link standard, and in conjunction with the TM5 Sercos or EtherNet/IP bus couplers. It transforms the devices into real communicators, offering a wide range of functions with associated setting options and status information because of their communication capability.

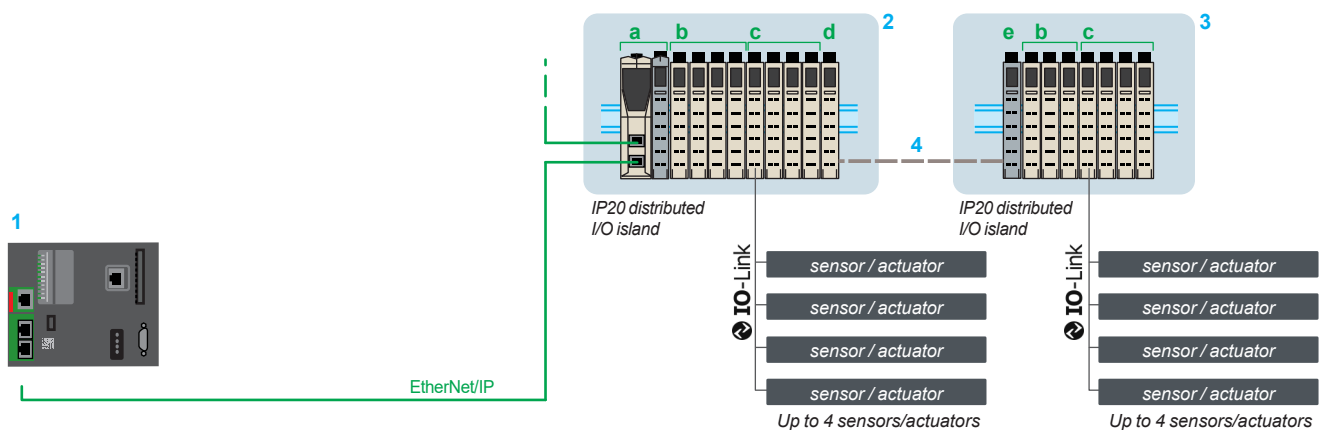

■ **TM5SE4IOL** IO-Link master module is designed for PacDrive LMC Eco/Pro2 motion controllers and Modicon M262 logic/motion controllers, and is suitable:

- on Sercos with Pacdrive LMC controllers,
- on Sercos and Ethernet/IP with Modicon M262 logic:motion controllers.

■ **TM5SE4IOL** is compatible with IO-Link Editor, and enables to integrate IODD files version 1.1 (*IODD: IO Device Description*).

Communication module for RS232 serial link

Presentation

TM5SE1RS2 communication module is designed for PacDrive LMC Eco/Pro2 and Modicon LMC078 motion controllers, and the Modicon M262 logic/motion controller. It provides multiple RS232 ports on the Sercos III bus for connecting third-party devices to controllers.

TM5SE1RS2 communication module can be integrated into remote and distributed architectures.

EcoStruxure Machine Expert software provides configuration and read/write functionality.

Common distribution modules

Presentation

TM5SP●●● common distribution modules make cabling more flexible by “branching” the different voltages needed to power the I/O expansion modules used.

Each common distribution module comprises three parts to be ordered separately:

- A common distribution electronic module
- A bus base
- A terminal block to be chosen according to the number of terminals

These modules can be mechanically assembled before mounting on a symmetrical rail. They offer the following advantages:

- Removable terminal block
- Spring terminals that can be used for quick, tool-free connection of the sensors and preactuators (the quality of the spring terminals avoids the need for periodic retightening)
- Hot swapping capability

The power supply common distribution module offer comprises:

- Common distribution electronic modules that have an integral, removable fuse
- **TM5SD0000** non-functioning dummy electronic module, which increases the degree of flexibility in terms of managing the various options for an installation (machine with or without temperature sensors, for example). It is also used to reserve a physical slot and a logical address on the backplane bus, for adding a functioning module (such as an application-specific I/O expansion module) at a later date.

Modicon TM5

High-Performance and Safe IP20 Modular I/O System
Safety logic controllers and safety I/O modules

Presentation

Modicon TM5CSLC●00FS safety logic controllers are suitable for applications requiring distributed safety over the Sercos III bus:

- They can manage a group of 20 up to 100 safety nodes consisting of I/O islands, with a fastest task cycle time of 1 ms.
- They are powered in 24 V DC power supply and are equipped with two integrated shielded RJ45 ports for connecting the Sercos III bus and a memory key interface.

Architecture example

The architecture comprises:

- PacDrive LMC motion controller (1) (or a Modicon M262 motion controller) as Sercos bus master
- Modicon TM5CSLC●00FS safety logic controller (2), as Sercos slave interface: it manages the safety-related application over the Sercos III bus.
- Modicon TM5 (3) and Modicon TM7 (4) safety I/O modules: connected to Modicon TM5CSLC●00FS safety logic controllers by means of Modicon TM5 Sercos interface modules (5),
- Lexium 62 safety servo drives (6),
- Lexium 62 ILM integrated drive (7)

Functions

- Modicon TM5CSLC●00FS safety logic controllers provide the following functions:
 - Configuration management
 - Parameter management
 - Secure execution of the application program
 - Device assistant (used to exchange firmware on safety devices in architecture monitored by LMC motion controllers and Modicon M262 motion controllers.
 - Firmware exchange on safety devices via FDR (Fast Device Replacement) in architecture monitored by Modicon M262 motion controllers

Programming

- The safety system is programmed using **EcoStruxure Machine Expert** software, with its **Safety addon** installed. The editor is embedded into the programming environment where each hardware component is defined: Modicon LMC motion controller (or Modicon M262 motion controller), TM5CSLC●00FS safety logic controller, Modicon TM5 safety I/O modules, Modicon TM7 safety I/O blocks, Lexium 62 servo drives, Lexium 62 ILM integrated drive.
- The application program and configuration of the safety hardware are managed by the software editor. The hardware configuration remains the same as the previous hardware TM5SLC100/200: the existing configuration is reusable. Existing project updates to new via Eco Struxure Machine Expert /Safety addon with manual adjustment of safety timing parameters.

Fieldbus characteristics

Distributed I/O	Sercos bus interface module (with PacDrive LMC Eco/Pro2 logic controllers or M262 motion controller)
Interface	Internal 2x switch (2x shielded RJ45 port)
Cable length	Maximum 100 m (328 ft) between two safety nodes (segment length)
Transfer rate	100 Mbps, Full duplex

Modicon TM5

High-Performance and Safe IP20 Modular I/O System
Interface module for distributed I/O over Ethernet

Ethernet network

Industrial Ethernet is the term used to designate the industrial communication protocols that use standard Ethernet physical layers such as EtherNet/IP, TCP, and UDP.

It is possible to connect industrial products (industrial communication protocols), like controllers, variable speed drives, and robots, and products that use proprietary TCP/UDP-based protocols to an Industrial Ethernet network. It is also possible to use different Industrial Ethernet protocols simultaneously on the same network.

Distributed I/O over Ethernet

TM5NEIP1 interface module is designed for creating distributed I/O islands (IP20 and IP67) on the Ethernet network, managed by a master controller, and for exchanging data using the EtherNet/IP protocol between controllers and distributed I/O on the Ethernet network.

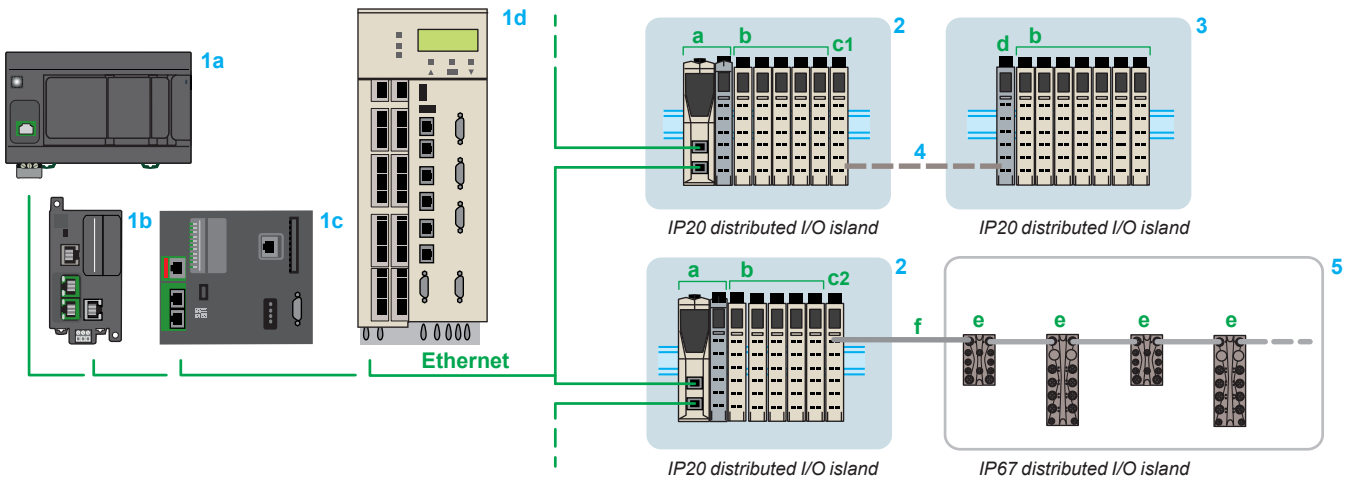

It is compatible with PacDrive LMC Eco/Pro2 motion controllers, Modicon M241/M251 logic controllers, and the Modicon M262 logic/motion controller.

Special features of the interface module

- Embedded Web server
- Embedded cybersecurity (Achilles L1) and user access rights management via a Web server
- Two Ethernet ports on the front of the module for communicating with the TM5 bus coupler (the second port can be connected to other devices in a daisy chain or ring topology)
 - Ethernet Adapter half duplex/full duplex service, autonegotiation, and auto-MDI/MDIX supported
 - 10/100 Mbps data exchange rate
 - DHCP client

Embedded Web server

- 1 a Modicon M241 logic controller b Modicon M251 logic controller c Modicon M262 logic/motion controller d PacDrive LMC Eco/Pro2 motion controllers: Ethernet network masters
- 2 TM5 Ethernet interface module (slave) (a) + TM5 modules (b) + TM5SBET1 (c1)/TM5SBET7 (c2) transmitter modules
- 3 TM5SBER2 receiver module (d) + TM5 I/O modules (b)
- 4 TM5 expansion bus: TCSXCNNX100 remote I/O connection cable
- 5 Modicon TM7 blocks (1) (digital or analog I/O) (e) + TM7TCSXC�E bus expansion cable (f)

Modicon TM5

High-Performance and Safe IP20 Modular I/O System
Interface module for distributed I/O over Ethernet

Description

The Ethernet interface module comprises four parts to be ordered separately:

- a TM5ACBN1 bus base (a)
- a TM5NEIP1 network interface electronic module (b)
- a TM5SPS3 power distribution electronic module (c)
- a TM5ACTB12PS removable terminal block (d)

The Ethernet interface module can also be ordered as a complete kit comprising all these parts.

These modules can be mechanically assembled on the bus base before mounting on a symmetrical rail. They offer the following advantages:

- A removable terminal block
- Spring terminals that can be used for quick, tool-free connection of the power supply for the interface module and the I/O expansion modules (the quality of the spring terminals avoids the need for periodic retightening)

This assembly comprises:

- 1 A mechanical clip for locking onto a symmetrical rail
- 2 A bus expansion connection on the side of the base to provide the link with the adjacent module
- 3 A slot for the Ethernet interface module with terminals
- 4 A slot for the power distribution module with terminals
- 5 An LED display block for the interface module channels and diagnostics
- 6 Two rotary switches for address selection on the bus
- 7 A slot for the plain text cover holder (label holder)
- 8 An LED display block for the power distribution module channels and diagnostics
- 9 A removable spring terminal block with locking clip and slots for colored ID markers
- 10 Two RJ45 connectors for the Ethernet network connection (network connected/ network disconnected)

Modicon TM5

High-Performance and Safe IP20 Modular I/O System
Interface module for distributed I/O on CANopen bus

CANopen bus

The CANopen fieldbus is specially designed to be integrated into control systems. It provides openness and interoperability for various devices (drives, motor starters, smart sensors, etc.). Having CANopen connectivity at several levels can help to reduce costs and optimize creation of the control system. It offers the following advantages:

- Quicker wiring time
- More reliable load
- Flexibility when adding or removing devices, as well as easier installation

Distributed I/O on CANopen bus

TM5NCO1 interface module is designed for creating distributed I/O islands (IP20 and IP67) on the CANopen bus. It is compatible with Modicon M258 logic controllers, Modicon LMC058 and Modicon LMC078 motion controllers, and the Modicon M262 logic/motion controller (equipped with its **TM5NCO1** communication module for CANopen bus).

- 1 a M258 logic controller, b Modicon LMC058 or Modicon LMC078 motion controller, c **TM5NCO1** communication module and Modicon M262 logic/motion controller, d PacDrive LMC Eco/Pro2 motion controllers: CANopen bus masters

High-Performance and Safe IP20 Modular I/O System

Interface module for distributed I/O on Sercos III bus

Sercos III bus

Fully embedded real-time communication: The Sercos III bus smooths the way for integrating safety-related control systems. It can have a line, tree, or ring topology.

Sercos is a true standard; it does not rely upon a specific manufacturer.

Distributed I/O on Sercos III bus

TM5NS31 interface module is a bus coupler, designed for creating distributed I/O islands (IP20 and IP67) on the Sercos III bus. It is compatible with PacDrive LMC Eco/Pro2 motion controllers, and the Modicon M262 logic/motion controller.

- 1 a PacDrive LMC Eco/Pro2 motion controllers, b Modicon M262 motion controller: Sercos bus masters, c Modicon TM5CSLC●00FS safety logic controller: Sercos bus slave
